IN THE ABSTRACT:

Please amend the abstract as follows:

A managing computer within a computer [[32 ]]network serves to log messages received from individual computers within that computer network [[2 ]]indicating detection of malware. The managing computer detects patterns of malware detection across the network as a whole a triggers associated predetermined anti-malware actions. These may include forcing specific computers to update their malware definition data, forcing particular computers to change their security settings and isolating individual portions of the computer network.
